DONE-FOR-YOU WEBSITE

Affiliate Theme Guide

Install and activate the theme, connect your Resend account, add your affiliate link, configure your domain's DNS, publish your pages, and you're ready to send traffic.

WHAT YOUR SITE DOES WHEN YOU FINISH

1. A visitor lands on your landing page
2. They type their email into the form
3. The form sends their browser to your affiliate link
4. Your emails deliver what your landing page promises

BEFORE YOU START

Have these things ready

- [ ] `affiliate-theme.zip`
- [ ] **WordPress installation you can log into as an admin**
- [ ] **Domain**
- [ ] **Resend account**
- [ ] **Postal mailing address**
- [ ] **Affiliate link**

The eleven steps at a glance

	STEP	WHERE
1	Download the theme	**affiliatemarketconnect.com/members/domain-web-hosting**
2	Upload and install it	**wp-admin › Appearance › Themes**
3	Activate it	**wp-admin › Appearance › Themes**
4	Set your permalinks	**wp-admin › Settings › Permalinks**
5	Create your Resend account and API key	**resend.com › API keys**
6	Fill in the theme's settings and save	**wp-admin › Settings › Affiliate Theme Settings**
7	Add your DNS records and click Check	**Where your domain's DNS is managed**
8	Edit and publish your landing page	**wp-admin › Appearance › Editor**
9	Make the landing page your home page	**wp-admin › Settings › Reading**
10	Edit and publish your legal pages	**wp-admin › Appearance › Editor**
11	Point WordPress at your Privacy Policy	**wp-admin › Settings › Privacy**

STEP 1

Download the theme

Go to **affiliatemarketconnect.com/members/domain-web-hosting**

1. Download your DFY WordPress Website.

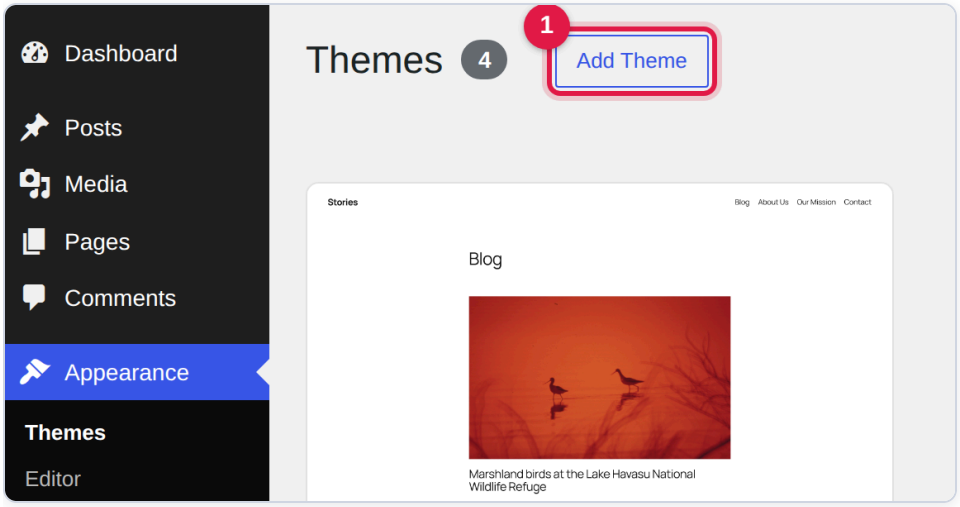

STEP 2

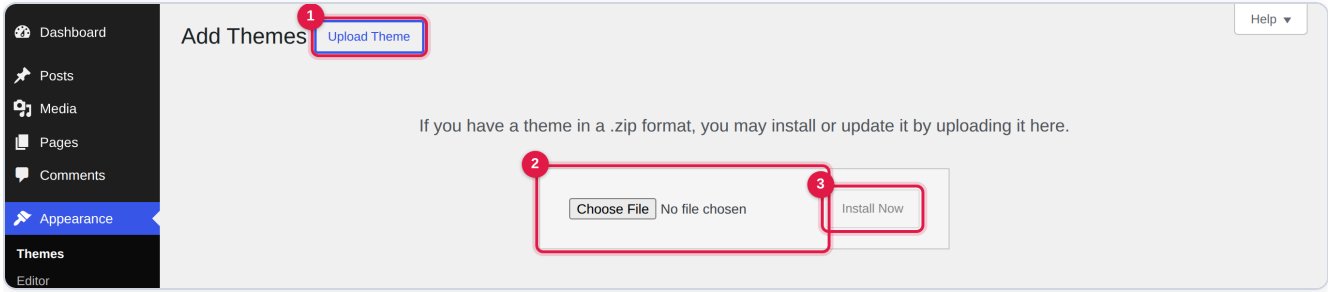

Upload and install the theme

Go to **yoursite.com/wp-admin** › **Appearance** › **Themes**

1. Click **Add Theme.**

1. Click **Upload Theme.**
2. Click **Choose File** and pick `affiliate-theme.zip`.
3. Click **Install Now.**

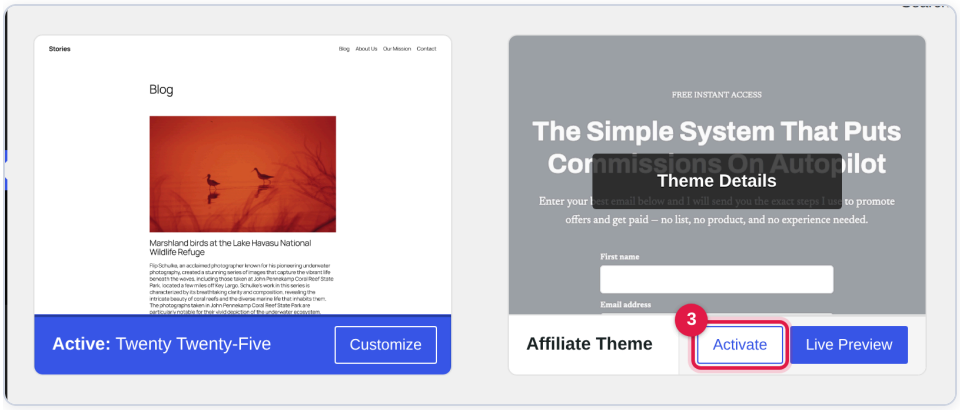

STEP 3

Activate the theme

Go to **wp-admin** › **Appearance** › **Themes**

1. Point at the **Affiliate Theme** card.
2. Click **Activate**.

What activation creates for you

The moment you activate it, the theme adds seven pages, all as drafts:

- **Landing Page — Centered**
- **Landing Page — Split**
- **Landing Page — Long Form**
- **Privacy Policy**
- **Terms of Service**
- **Earnings Disclaimer**
- **Affiliate Disclosure**

It also adds a new settings page, **Settings › Affiliate Theme Settings**.

Nothing goes public until you publish it.

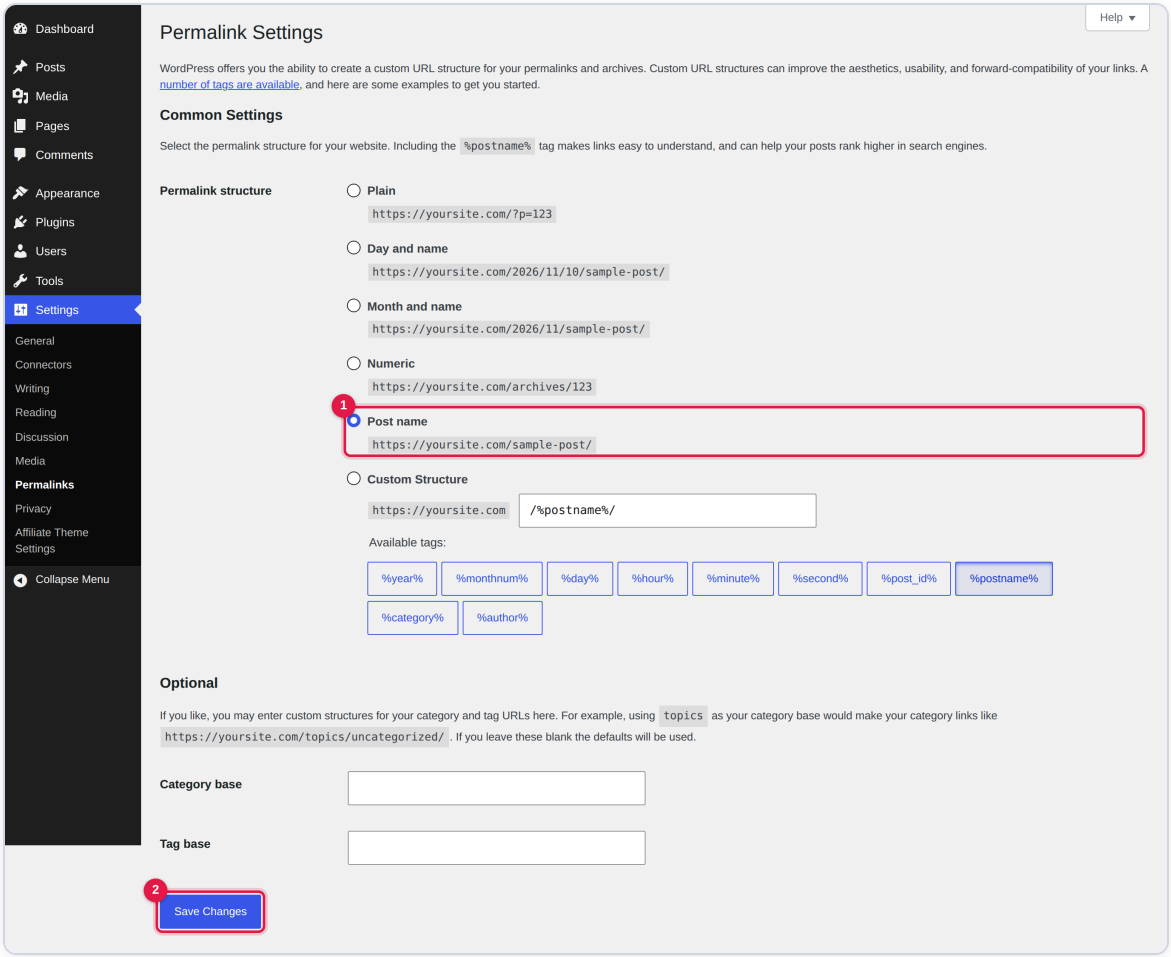

STEP 4

Set your permalinks

Go to **wp-admin** › **Settings › Permalinks**

Permalinks set the structure for how each page and post get added to the end of your domain. Set it now, before you publish anything, so no address changes after you save it.

1. Choose **Post name.**
2. Click **Save Changes.**

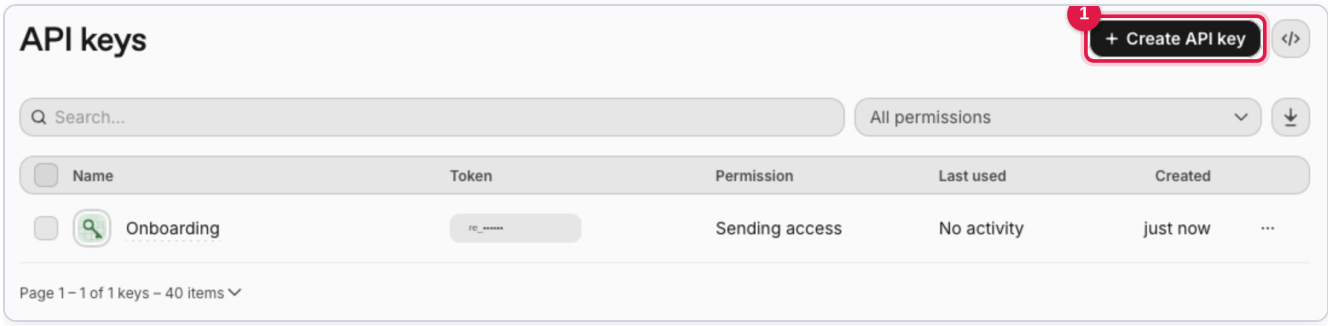

STEP 5

Create your Resend account and API key

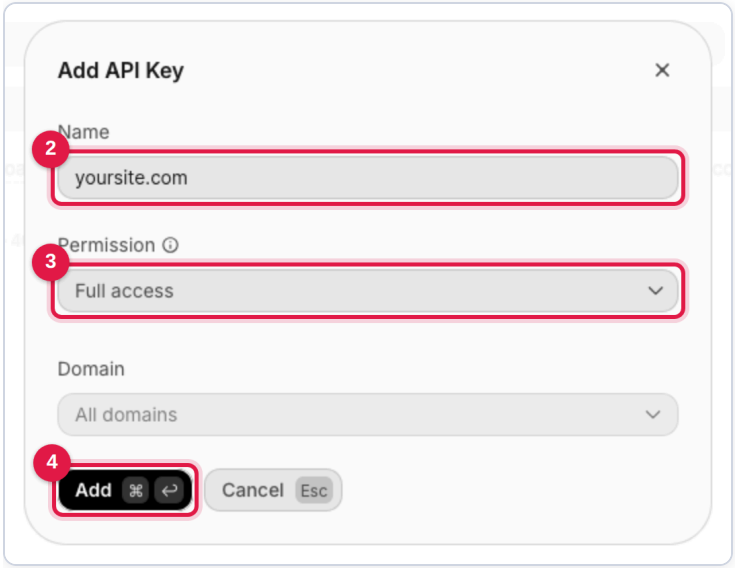

Go to **resend.com** › **API keys**

Resend is the email service that sends your automated emails. If you don't have an account you can sign up for free. The theme builds emails, templates and automations in your Resend account, so you don't have to build an email or automation yourself.

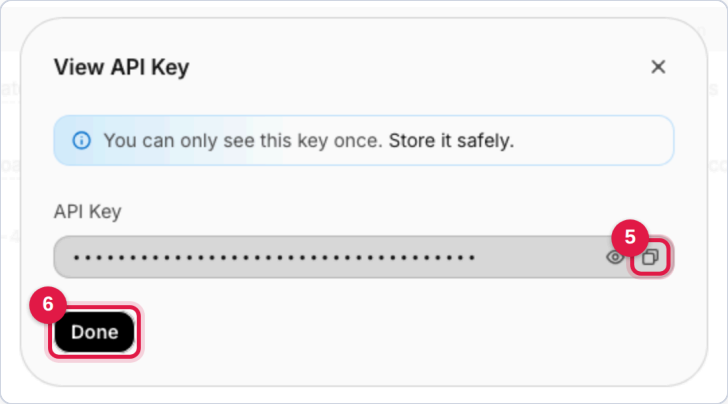

1. Click **Create API key**. The *Onboarding* key is not a full access key.

2. Type a name you'll recognize.
3. Choose **Full access**.
4. Click **Add**.

5. Copy the API key.
6. Click **Done**.

Keep your key private

A Full access key controls your whole Resend account. Never paste it into a page, an email or a chat. The theme keeps it on your server and never shows it again: after you save, its field shows only dots.

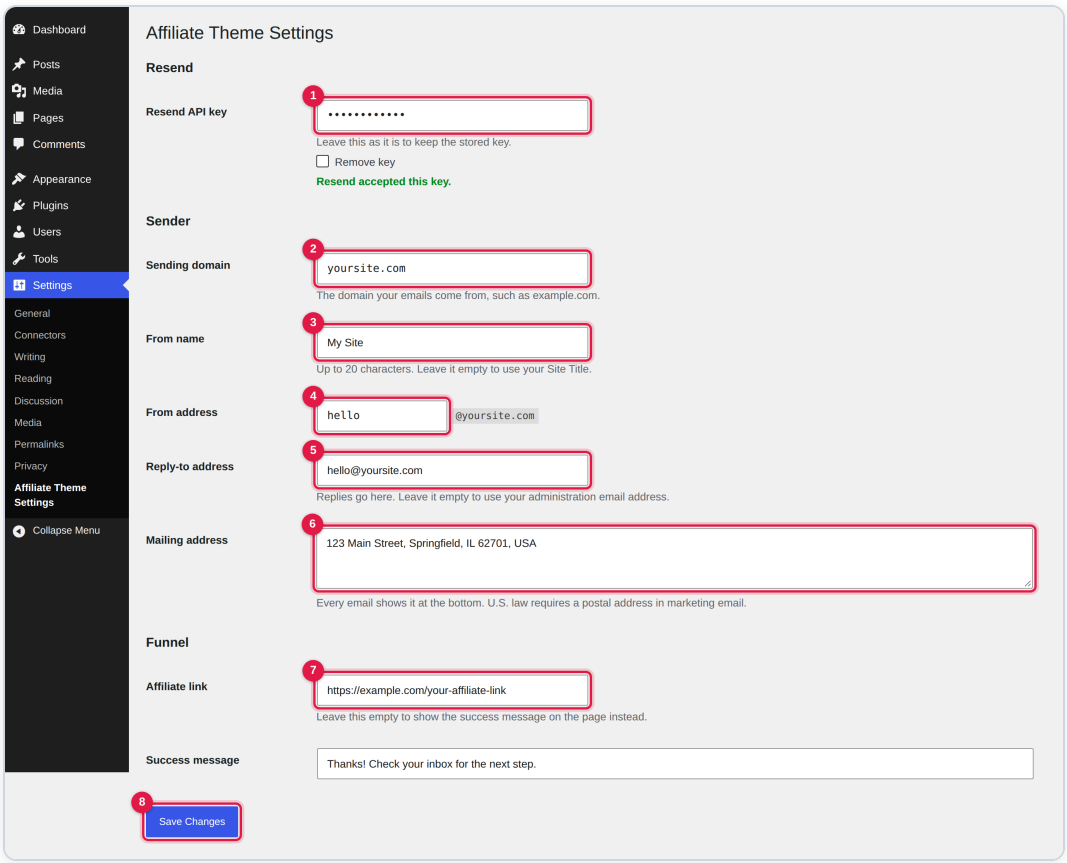

STEP 6

Fill in the theme's settings and save

Go to **wp-admin** › **Settings › Affiliate Theme Settings**

This settings page wires up your whole done-for-you website.

1. **Resend API key** - Paste your API key from resend.com.
2. **Sending domain** - The domain your emails come from, usually your site's own domain `yoursite.com`.
3. **From name** - The name your subscribers see, 20 characters at most `Your Name`.
4. **From address** - The part before the `@`.
5. **Reply-to address** - Where replies go: leave it empty to use your WordPress admin email address. ***Optional: read replies in Resend*** in Step 7.
6. **Mailing address** - Your postal mailing address: U.S. law requires one at the bottom of every marketing email, so the emails don't start until it's filled in.
7. **Affiliate link** - Paste your full affiliate link. `https://affiliatelink.com/yours`
8. Click **Save Changes**.

What happens when you save

The theme goes to work in your Resend account. Leave the page open and don't touch anything until it's done. **Waiting time: about 1 minute.**

- The theme adds your domain to your Resend account, and waits until Resend verifies your domain's DNS records.
- The theme creates emails, templates, and automations in your Resend account, writing emails in sequences for each of your landing pages.

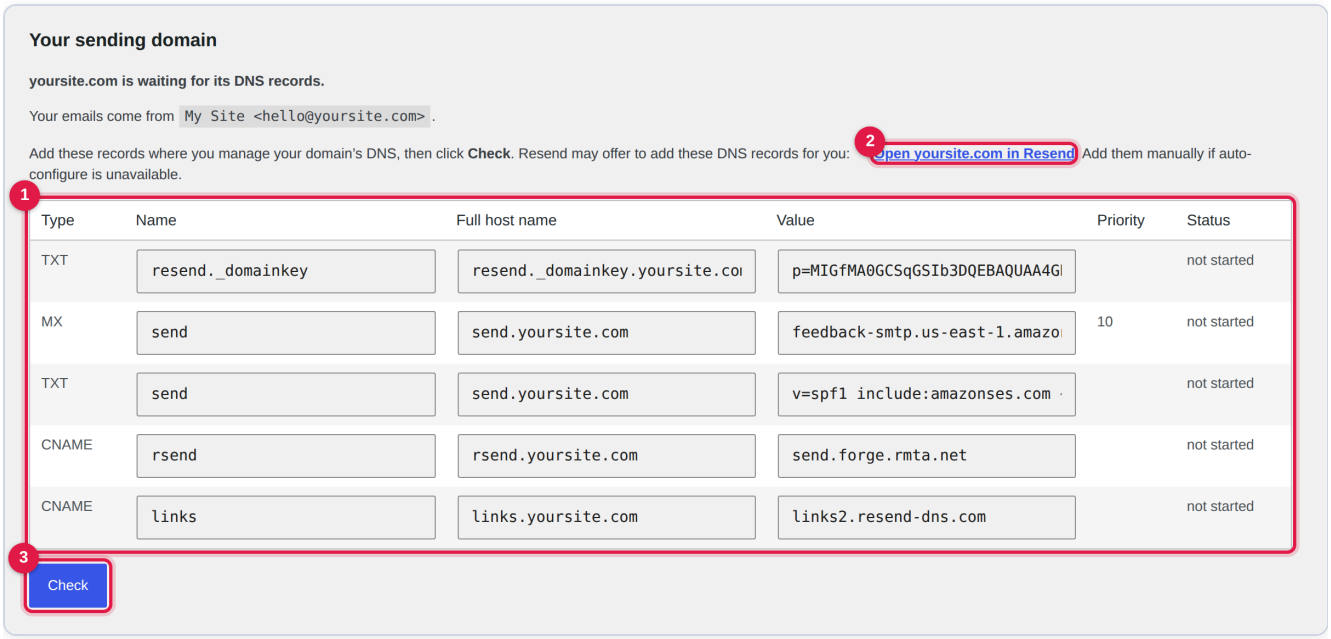

STEP 7

Add your DNS records

Go to **wp-admin** › **Settings** › **Affiliate Theme Settings**

Add each record where your domain's DNS is managed. Resend may offer to add the records for you. If Resend does not offer to add the records for you, add them manually by copying and pasting.

1. Scroll down the page to **Your sending domain**.
2. Click on the link **Open yoursite.com in Resend**.
3. Add all five records Resend needs to verify before you click **Check**.

The same records in Resend

Go to **resend.com** › **Domains** › **yoursite.com** › **Records**

1. Copy and paste each record where your DNS is managed.

Enable Sending

SPF ↗

Type	Name	Content	Proxy status	TTL	Priority
MX	send	feedback-smtp.[…]amazonses.co		Auto	10
TXT	send	v=spf1 include[…]nses.com ~al		Auto	
CNAME	rsend	send.forge.rmta.net	DNS Only	Auto	

Enable receiving

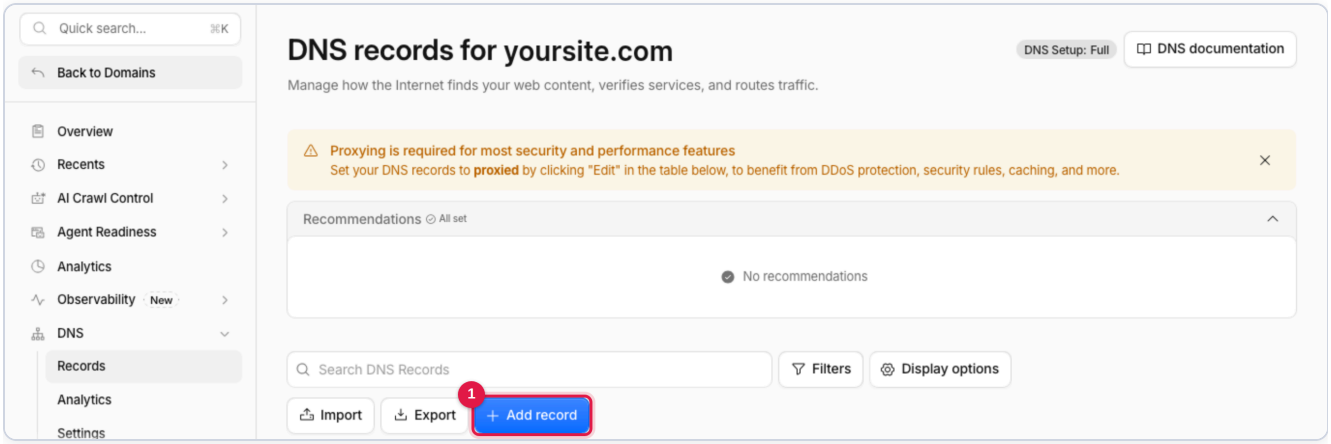

Enable Tracking

Type	Name	Content	TTL	Priority
CNAME	links	links2.resend-dns.com	Auto	

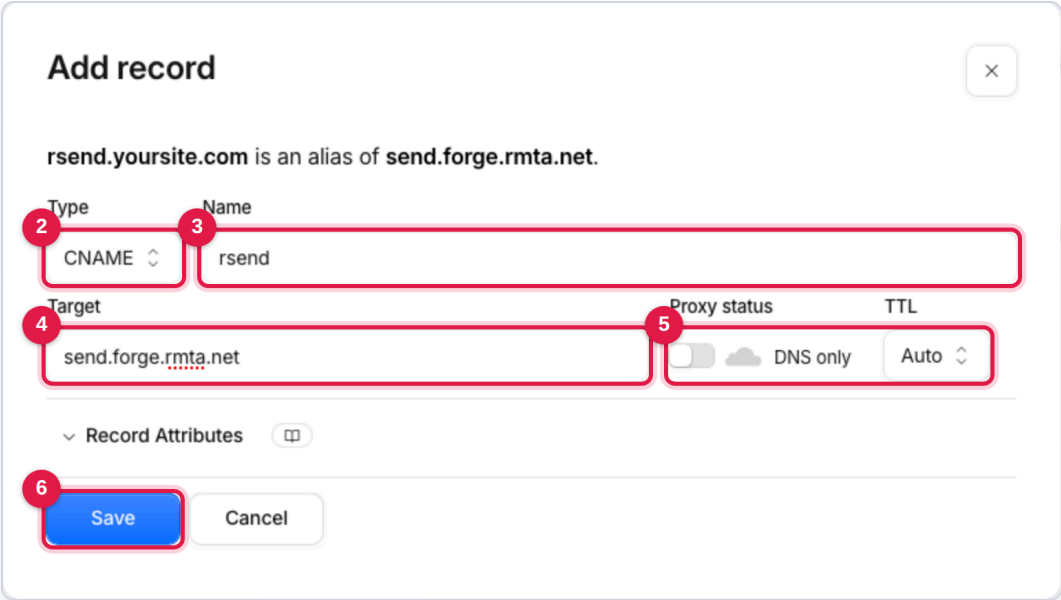

Adding the records in Cloudflare

Go to **cloudflare.com** › **Dashboard** › **Domains** › **yoursite.com** › **DNS** › **Records**

1. Click **Add record**.

2. Choose the record's **Type**.
3. Paste its **Name**.
4. Paste its **Content** (**Target** for a CNAME record).
5. Match its **TTL** and its **Proxy status**.
6. Click **Save**.
7. Click **Add record** again for the next one, until all five are in.
8. Back in **Affiliate Theme Settings**, click **Check**.

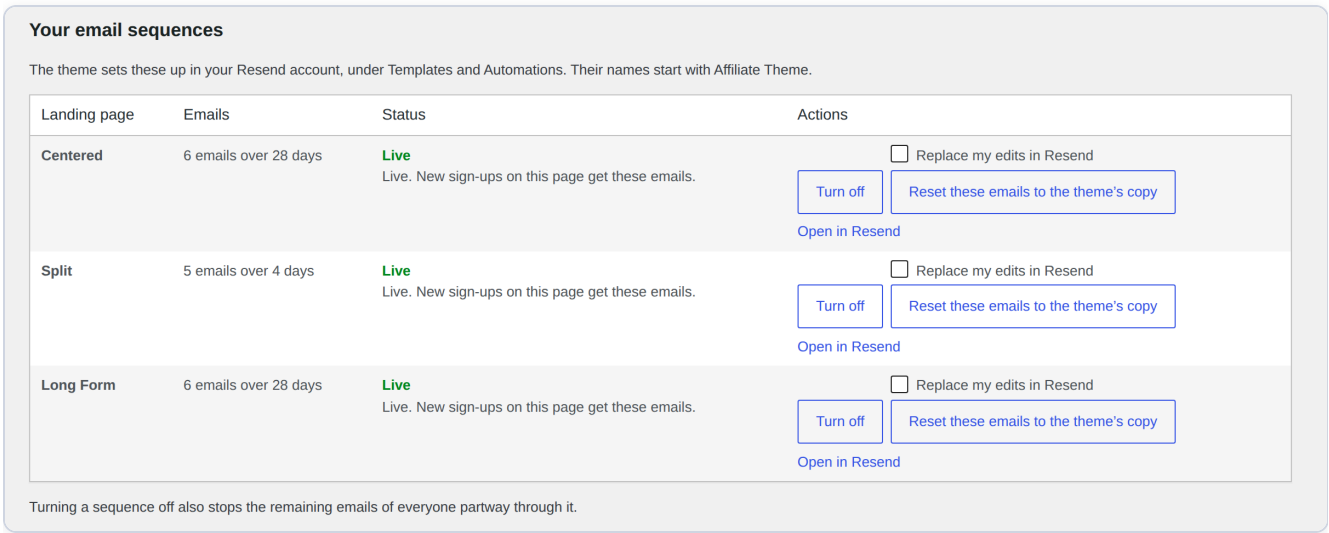

If Your sending domain still says yoursite.com is waiting for its DNS records.

Give it some time, come back and refresh the page.

Your email sequences

Go to **wp-admin** › **Settings › Affiliate Theme Settings**

STATUS	WHAT IT MEANS
Live	The email sequence is turned on and will deliver its emails to new sign-ups when assigned to a published landing page.
Waiting	The email sequence is ready but still needs something before it can be live. The form on that page stays hidden until then.
Needs update	Something in Resend is out of date, often because you changed a setting. Click **Finish setting up emails**. If it says an email *has an edit in Resend that is not published*, publish or discard that edit in Resend first, then save the settings again.
Off	You turned it off. New sign-ups on that page get no emails and people partway through stop getting emails. If you see *It was turned off in Resend.*, someone switched the automation off in Resend.
Not set up	The emails aren't in Resend yet, or Resend refused them. The line under it gives Resend's reason. Click **Finish setting up emails** to try again.

Changing your settings later

If you change your **From name**, **Reply-to address**, **Mailing address**, or **Affiliate link** and click **Save Changes**, the theme updates all your emails in Resend.

People partway through an email sequence get the new details in their next email as long as the sequence wasn't turned off.

Optional: read replies in Resend

If you want to read replies sent to your email address in Resend, create an inbox.

> Skip this if you already get email at your domain's email address like through Google Workspace, Outlook or your host

Configuring your inbox in Resend

Go to **resend.com** › **Domains** › **yoursite.com** › **Records**

1. Toggle on **Enable receiving**.
2. Add the `MX` record it shows in Cloudflare.
3. In Resend, open **Inboxes** and create an inbox for your **From address**.

In Affiliate Theme Settings

Go to **wp-admin** › **Settings** › **Affiliate Theme Settings**

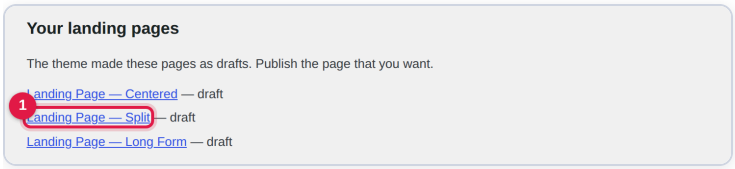

1. Type your From address in **Reply-to address**, for example `hello@yoursite.com`.
2. Click **Save Changes**.

STEP 8

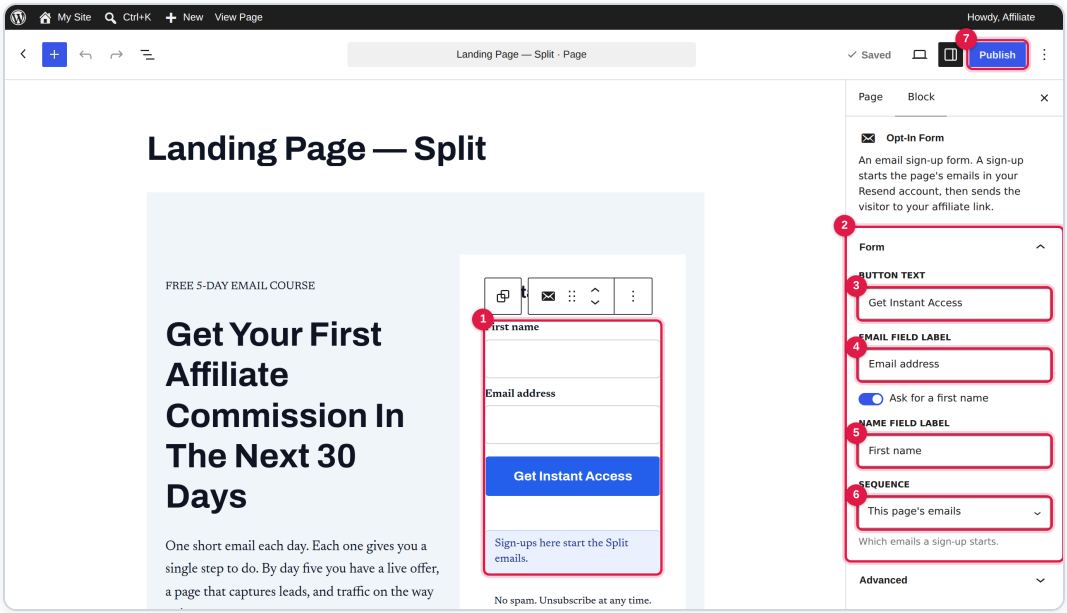

Edit and publish your landing page

Go to **wp-admin** › **Settings › Affiliate Theme Settings**

1. Scroll down the page to **Your landing pages**.
2. Preview each landing page.
3. Publish the one you want to use.

1. Click the form.
2. In the sidebar that opens on the right, the **Form** panel holds the settings you can edit:
3. **Button text**
4. **Email field label**
5. **Name field label**
6. **Sequence**: each landing page has its own email sequence, written to keep that page's promise.
7. Click **Publish**.

Every headline, paragraph, list and image can be edited: click it and type, or replace the image.

Leave the other two landing pages as drafts.
A published page can always be unpublished back to a draft.

The theme writes a description, a social preview and search data for each page

Three things decide what they say:

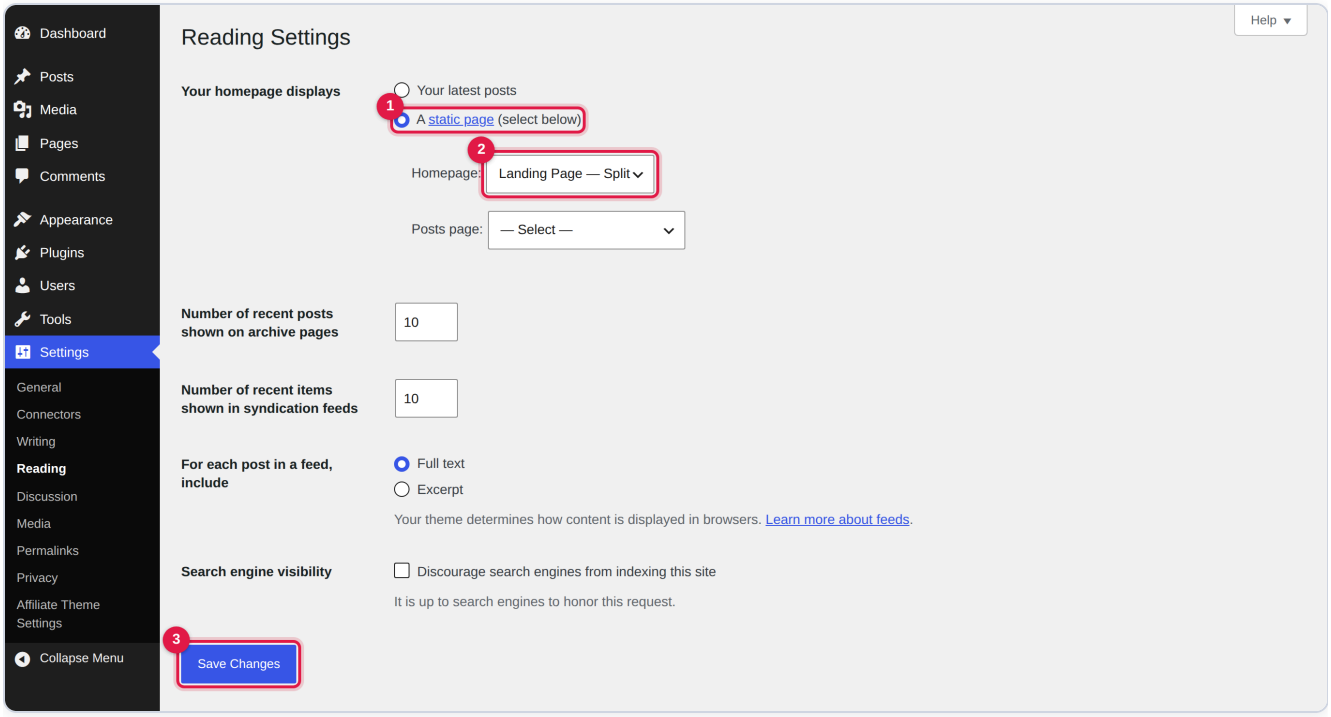

- **Settings** › **General**. The **Site Title** and **Tagline** are what Google, Facebook, X, and LinkedIn show as your site's preview when shared. The **Site Icon** is the picture that the browser tab shows for your site.
- **Featured image**: the picture shown when someone shares your landing page. 1200px × 630px.
- **Excerpt**: the description Google shows under your title. Leave it empty to use the first paragraph after the first headline of your page.

STEP 9

Make the landing page your home page

Go to **wp-admin** › **Settings** › **Reading**

1. Choose **A static page (select below)**.
2. Click the dropdown **Homepage**.
3. Choose the landing page you published in Step 8.
4. Click **Save Changes**.

Now when you visit your site's address your landing page is the first thing people see.

Is your landing page missing from the list?

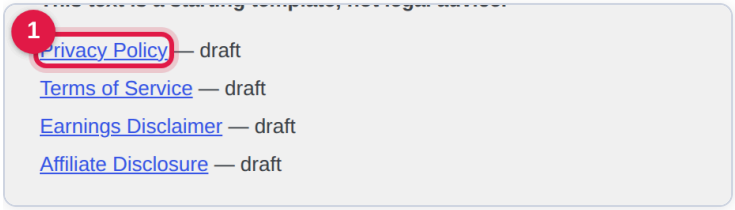

This list shows only published pages. Go back to Step 8 and click **Publish**.

STEP 10

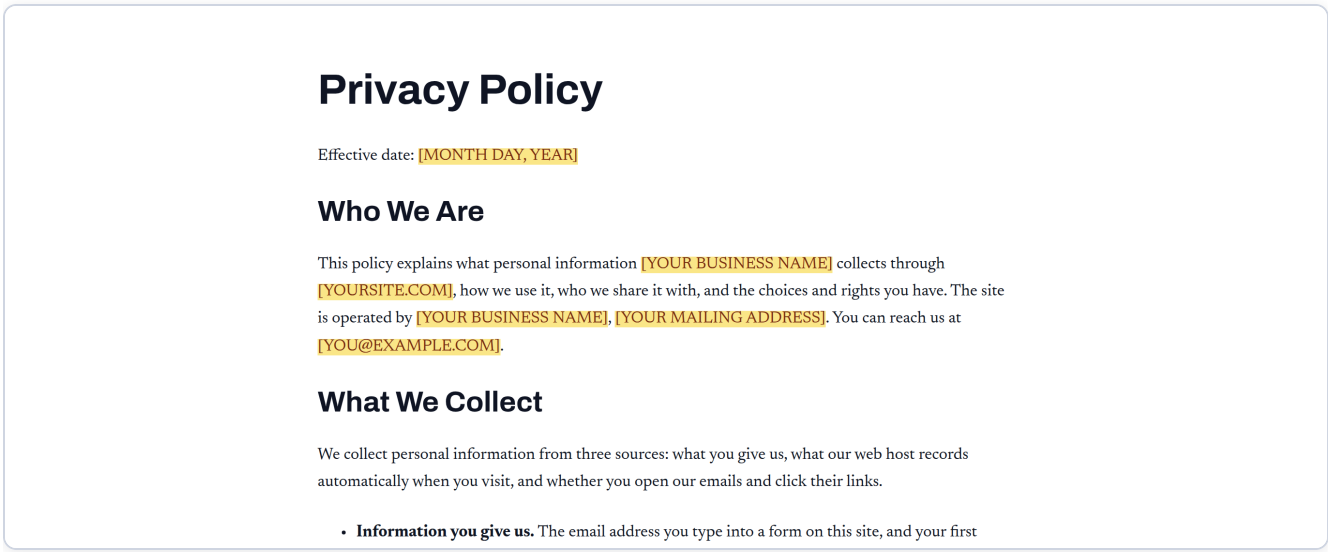

Fill in and publish your legal pages

Go to **wp-admin** › **Settings › Affiliate Theme Settings**

1. Scroll down the page to **Your legal pages.**
2. Edit each legal page.
3. Replace every `[PLACEHOLDER]` with your own details.
4. Click **Publish.**

A published legal page joins your site's footer as a link.

Privacy Policy

Effective date: [MONTH DAY, YEAR]

Who We Are

This policy explains what personal information [YOUR BUSINESS NAME] collects through [YOURSITE.COM], how we use it, who we share it with, and the choices and rights you have. The site is operated by [YOUR BUSINESS NAME], [YOUR MAILING ADDRESS]. You can reach us at [YOU@EXAMPLE.COM].

What We Collect

We collect personal information from three sources: what you give us, what our web host records automatically when you visit, and whether you open our emails and click their links.

- **Information you give us.** The email address you type into a form on this site, and your first

Each placeholder is spelled the same way everywhere, so your browser's find command (`Ctrl + F`, or `Cmd + F` on a Mac) finds them all.

PLACEHOLDER	REPLACE IT WITH
[YOUR BUSINESS NAME]	Your name or your business's legal name
[YOURSITE.COM]	Your domain
[YOU@EXAMPLE.COM]	Your email address
[YOUR MAILING ADDRESS]	Your postal address, the same one as in your emails
[YOUR STATE/COUNTRY]	The state or country whose law applies to your business
[MONTH DAY, YEAR]	The date the page takes effect, usually the day you publish it

If you add analytics, advertising or cookies

Go to **wp-admin** › **Appearance** › **Editor**

Your Privacy Policy says you don't sell or share visitors' information. That stays true only while your site runs no analytics, no advertising pixels and no tracking cookies. Keep each page true to your business. If you start using Google Analytics, any advertising platform or cookies, replace that section of your Privacy Policy:

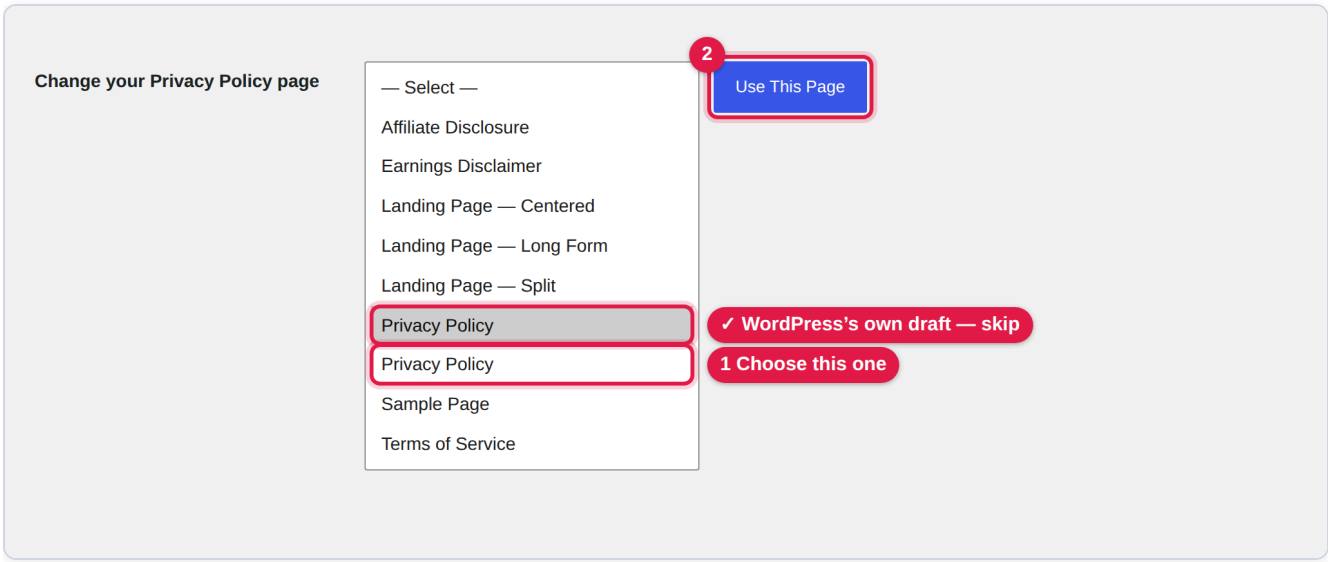

1. Click **Pages**.
2. Click **Privacy Policy**.
3. Remove the heading ***We Do Not Sell Or Share Your Information*** and the paragraph after it.
4. Click the **+** button in the top-left corner.
5. Click the **Patterns** tab.
6. Click **Affiliate Theme**.
7. Click ***Legal — Privacy: Analytics and Advertising*** and it will insert itself after the section ***Who We Share It With***.
8. Replace its placeholder [PROVIDER NAME] with each tool you use.
9. Click **Save**.

STEP 11

Point WordPress at your Privacy Policy

Go to **wp-admin** › **Settings** › **Privacy**

1. Click the dropdown list.
2. Choose the other **Privacy Policy**.
3. Click **Use This Page**.

Privacy Policy appears twice. The one that's already selected with the checkmark is WordPress's own unpublished draft.

FINISH

Test your funnel

1. Open a private or incognito browser window and go to your site's address.
2. Type an email address you own into the form and submit it.
3. Your browser should land on your affiliate link.
4. Within a few minutes, the first email arrives in your inbox.
5. In Resend, click on the **Audience** tab and the email address you submitted will show as a **Contact**.

If you sign up again with the same address on the same page, you're still sent to your affiliate link, but no new emails start: each landing page can send its email sequence to the same email address once.

HELP

Troubleshooting

WordPress says `This theme is already installed.`

You're uploading a newer copy over an older one. Click **Replace installed with uploaded.** Your pages are safe: a theme update never overwrites a landing page or legal page you've edited, nor emails you've edited in Resend.

Under the API key: `This key can only send email. The theme needs a key with Full access.`

You pasted a key with **Sending access**, such as Resend's *Onboarding* key. Make a new key with **Full access** (Step 5), paste it over the dots and save.

Under the API key: `Resend did not accept this key.`

The key is wrong or was deleted in Resend. Make a new key with **Full access**, paste it over the dots and save.

Under the API key: `WordPress could not reach Resend. Reload this page in a minute.`

Reload the page in a minute. If it keeps happening, ask your host whether they block outgoing connections.

Saving shows `The affiliate link is not a usable address. Start it with https://.`

Paste the complete link, including the `https://` at the start.

Resend says the domain is `already in use in another Resend account`

A domain can belong to only one Resend account. Use that account's API key here, or a different domain.

My DNS records still aren't verified

DNS changes can take a few hours to propagate. Check each record's name and value against **Your sending domain**, look for a name with your domain added twice, and make sure the CNAME records are **DNS only** on Cloudflare. Then click **Check** once more. You can also check **www.whatsmydns.net**.

My landing page says `Opt-in form is not ready:`

Only administrators see this note. Visitors see no form at all until it's fixed.

My forms vanished and every email sequence says Not set up

Open **Affiliate Theme Settings** and click **Finish setting up emails**: the theme finds them again without making new ones.

An email sequence says Needs update, or `It was turned off in Resend.`

If you switched off an email sequence in Resend, the theme will turn it off too; click **Turn on**.

Your email sequences say `Open tracking is off for this domain.`

Your emails still send. To turn it on, see *Configuring your domain in Resend* in Step 7.

Your email sequences say `Click tracking is off for this domain.`

Your emails still send. To turn it on, see *Configuring your domain in Resend* in Step 7.

Visitors see `Service unavailable. Please try again shortly.`

Your server got no answer from Resend. It's usually brief. If it lasts, check that the line under your API key reads **Resend accepted this key.**

Visitors see `Something went wrong. Please try again.`

Resend refused the sign-up, or the page's email sequence is turned off.

Emails stopped arriving

You may have reached your Resend plan's daily or monthly limit. Check your usage in Resend, under **Metrics**.

A legal page isn't in my footer

Only published pages are linked. Open the page and click **Publish**. The link then appears on every page at once.

How do I change the copyright line in the footer?

Go to **Appearance** › **Editor** › **Patterns** › **Footer**, edit the line *© 2026 – All rights reserved.* then save.

The legal pages that come with this theme are a starting template, not legal advice. Review them for your own business, or have a professional review them.
